RELEASE NOTES July 18, 2022

What's new in Zephyr Scale?

Hi!

Below are the major changes made to the product in June 2022.

New Features

- We have introduced possibilities to add comments to:
 - Test cases
 - Test cycles
 - Test plans

Bug Fixes

We have fixed a bunch of bugs but here are the main ones.

- Step statuses were not properly persisted when working on an ad-hoc execution.
- It was impossible to permanently delete test cases and test cycles.
- The configuration page was accessible even if the user was missing the corresponding permission.
- The test cycle completion was not properly calculated sometimes
- Some reports were not properly laid out
- It was impossible to save folders with a name longer than 255 characters.
- Cloning test cases with missing mandatory fields was not properly working.

Thanks!
